

Data Platform Assessment

The Data Platform assessment can help identify situations where meeting ad hoc business reporting needs requires the addition of new data sources into the Enterprise Data Warehouse (EDW).

REVIEW	RECOMMEND	OUR APPROACH
<p>We will assess:</p>	<p>We will make suggestions and recommendations of:</p>	<p>We allocate five days for the assessment. This includes:</p>
<ul style="list-style-type: none"> • Current data and information pain points, challenges and goals • Current data estate; including data sources, preparation and transformation, data formats, quality and complexity • Current reporting framework; including your reports, reporting solutions, audiences and priorities, reporting frequencies, alerting and notification, presentation, usage and distribution scenarios • Formal (pre-written reports/ dashboards) vs. informal (self-service) reporting requirements 	<ul style="list-style-type: none"> • Suggested quick-fixes and next steps based on your current solution • Data platform: including data extraction, transformation and loading (ETL), storage, and modelling, tools and technologies • Data integrity; logging diagnostics, master data and data quality • Patterns, practices and methodologies; appropriately matched to your requirements and needs • Reporting tools and techniques; including training and operations • Suitable training and upskilling for your in-house team 	<ul style="list-style-type: none"> • A visit to your site by one of our Senior Consultants to run discovery workshops with your technical and business stakeholders • Assessment and review of your current solutions, understanding business requirements, goals and challenges • Subsequent analysis of your solution and discussions/questions with your team • Preparing and presenting a Review Summary and Recommendations document • Feedback and follow-up
