

Streamline Envision: Power Platform

START SMALL, DREAM BIG & DELIVER FAST!

Learn the art of the possible with the Microsoft Power Platform through workshops which let you experience the technology and discover the benefits its application will bring to your business.

Understanding how technology can work for your business doesn't always require specialised skill sets of your people. Sometimes just understanding how low-code to no-code business tools apply to your business can get you the majority of the way there.

If you have heard of the Microsoft Power Platform but are unsure how you can apply it in your business, then Streamline Envision can help you.

Streamline Envision is a service that allows you to work with our team of experts who can help you explore a leader mentality and answer the question 'what can we do now that we couldn't do before?'

The Microsoft Power Platform is the low-code to no-code technology that allows businesses to build their own apps or automate their own processes, helping their users to work in a smarter way.

Get to know the "art of the possible"

Try the technology yourself

Ideate together

Who can benefit from Streamline Envision?

Streamline Envision can be of help for organisations in the initial stages of app development or process automation, or those that need some help in knowing where to start. This allows us to engage with your team to help you ideate the Power Platform application in your business.

Streamline Envision is a targeted, timeboxed and specific service, so that you can be introduced to the opportunity the Power Platform has for you and ideate its potential. Streamline Envision is aimed at transferring knowledge from experts that work with the Power Platform every day to those business users (technical and non-technical) that are exploring its capability.

What is the process?

Ideation requires a base understanding of what is possible as well as some light touch training on the tool itself. Once the foundation is set, we are well positioned to ideate in your specific context.

A standard set of training and workshops where our Power Platform experts give you an introduction to the Power Platform, collectively working through the building of an app or an automation of a process, as well as a session where we consider your specific business, its challenges and the opportunities that the Power Platform can unlock for you.

IMPLEMENTATION SCOPE

The engagement includes a full day of classroom-style training to cover the following topics: Common Data Service, Data Connectors, Power Apps and Power Automate.

A full day of practical labs that take your people through the building of a basic app and the creation of a simple automation flow using the topics covered above.

A full day of workshop-style, whiteboard ideation where we collectively map out a list of apps or processes that could be built on the Power Platform, centred around a value proposition specific to your business.

BENEFITS

The Approach

- Reduce time to value, addressing your quick wins with limited investment and greater returns
- Repeatable, so you can go through a Envision with Power Apps project as and when you have ideas to build out
- Collaborative process approach
- Knowledge building and transfer
- Implementation scope tailored to your requirements

The Power Platform

- Your data stays within the Microsoft Azure Cloud platform, with no data stored on personal mobile devices and controlled user access, including multi-factor authentication
- Rich design capability with a re-usable component-focus
- Support for no-code technical environment
- Easy integration with other platform and data providers e.g. Microsoft Office, SharePoint, Dynamics 365, Teams, MailChimp, Jira, Marketo, SAP and more.

APP TYPES

Canvas Apps

These apps are designed and built from a blank canvas without writing code, by dragging and dropping elements, just as you would design a slide in PowerPoint, with Excel-like expressions for specifying logic.

Model-driven Apps

A component-focused approach, this type of app doesn't require code – it can be as simple or complex as you make it. Much of the layout is determined for you and largely defined by the components you add to your app.

Power App Portals

Powerful, external-facing websites that allow users outside their organisations to create and view data in a structured way, or browse content. It allows the quick creation of a website with pages, layout, and content components.

PROCESS AUTOMATION TYPES

Automated, Scheduled or Triggered Flows

A flow that performs one or more tasks automatically after it's triggered either on demand, by an event or based on a schedule.

UI Flows

Start your journey with robotic processing and use UI flows to automate repetitive tasks in Windows and Web applications.

Business Process Flows

Define a set of steps to be followed, helping ensure that people enter data consistently and follow the same steps every time.
