Where do you sit on the path to cloud?

Every organisation's path to cloud is unique. Yet one thing's for sure. They all know they need to keep moving.

The march to cloud is on

$22.7B

By 2025, public cloud will grow to $22.7 billion, up from $9.9 billion in 2020[1]

52%

Over half of Australian and New Zealand organisations' IT systems will be in the cloud by 2022[2]

2x Speed

By the end of 2021, 80% of Australian[3] and 60% of New Zealand[4] organisations will be moving to cloud twice as fast as before

Use the cloud maturity model to identify your next steps

At a foundational level, you're just dipping your toes in the water with one or two cloud projects. The further you move up the model, the more your entire organisation reaps benefits like cost savings, efficiencies and scale – not to mention the ability to support your hybrid workforce.

Foundational
+ Ad hoc (exploratory clouds)
+ Individual projects
+ Landing zone

Intermediate
+ Cloud framework
+ Enterprise-scale design
+ Hybrid cloud
+ IaaS migration
+ Opportunistic PaaS

Proactive
+ Templated deployment
+ DevOps adoption
+ Pervasive PaaS adoption
+ Distributed data and applications
+ Data architecture strategy

Managed
+ Cost management
+ Compliance management
+ Mission critical workloads
+ Operational reporting
+ Cloud SLA
+ Monitoring
+ Governance
+ Integrated ITSM

Advanced / Automated
+ Automated deployments
+ Cost Optimisation
+ Micro-services, container adoption
+ API integrations
+ CI/CD in practice
+ Integrated SIEM
+ Application modernisation
